 (Partner Type)2cRGB.ppt

### Introduction

The Cisco partner logo may be used to communicate your relationship with Cisco. It should be displayed in conjunction with your company logo but may not be more prominent (in size or location) than your logo. Use only the Cisco partner logo provided to you and only as stated in your partner or program member agreement.

### File Formats, Colors, and Sizes

Cisco partner logos are provided in .eps, gif, and .emf formats in a variety of color spaces and sizes. See the tables at left for detailed information and file names. When matching color for embroidery use the PANTONE® coated color swatch.

The .psd format logos are intended to be placed over a color background in an Adobe Photoshop document. The document will then need to be saved in an appropriate file format. If saving as a .gif, .jpg, or .png use the highest possible quality settings.

- Do not** alter, redraw, or recolor any of the logos.
- Do not** scale the Bitmap RGB logos.

### Clear Space and Staging

An invisible rectangular border, equal in width to the "1/2B" in the illustration at left, should be maintained around the perimeter of the Cisco partner logo. In all media, the Cisco partner logo must be separated from any names, logos, or product names.

- Do not** place the Cisco partner logo on busy or low-contrast backgrounds.
- Do not** use the Cisco partner logo at less than .75-inch-wide in print.

For additional information refer to your Logo Usage guidelines.
